

5.1. Write a java program by using swing and jdbc to create an encrypt application.

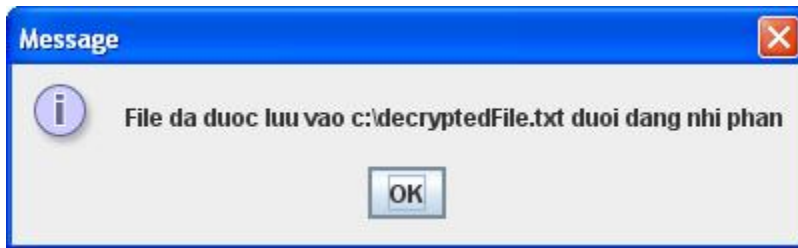

The output of the program is as shown as

Encrypt:

User chooses a text file which will be encrypted and chooses another binary file to save the content after encrypt.

Decrypt:

The content after decrypts will be saved on text file and shown in the textarea below.

5.2. Build a network application, such that sender signed and sends files to receiver – receiver receives files and verify the authenticity of the signature.

5.3. Review assignment 1, 2, 3 in the CD
