

7.1. Review assignments 1, 2, 3, 4, 5.

7.2. Use java.io and other classes to build an application for bank management, follow this guide:

- Create a class Account (Account.java) that represents information about an customer account. This account includes accountNumber, accountName, accountBalance and methods.
- Create a class Bank (Bank.java) that stores details about accounts of customers. Its methods including:
 - i. createAccount() the class enables at most 100 is managed
 - ii. withdraw() and deposit(): input accountNumber, transaction amount and process transaction.
 - iii. display() show information of accounts
- Class bankTest (bankTest.java) contains menu as below

```
Menu
-----
1. Create an Account
2. withDraw
3. Deposit
4. Save to file
5. Display
6. Exit
Your choice: _
```

- Develop other methods in this class to conform specified function.
- Save to file: Account details is stored into a binary file account.dat
- Display: show information of all accounts that have accountBalance > 100
